CONDITIONS FOR FREE BLOOD TEST

In partnership with ASAP laboratories, we are aiming to take blood samples from healthy dogs and cats to help establish "Normal" blood test reference range values for common laboratory tests

These blood tests are usually worth over \$160!

Age - Your pet must be between 1 year and 8 years old (and not be greyhounds or whippets)

Consultation - Your pet must have a consultation with a vet for a full clinical examination and health check to ensure that they are healthy enough to take part. Suitability to take part in the trial will be at the discretion of the attendant veterinarian. There will be a charge for the Consultation (\$73.50). This can be part of Annual Health Check and Vaccination if they are due.

Health - If your pet has any chronic disease, conditions, or clinical signs that may potentially alter their blood tests, they will not be able to take part.

Results - Your pets blood test results will be reported to us, and we will contact you to advise you of the results, and they will be attached to your pets records. If something shows up on your pets blood tests unexpectedly, we can then discuss with you further tests or work ups required.

Duration of Trial - Once ASAP has gathered enough data from enough patients, the trial will end, and the offer for free blood tests will cease.

IF YOU HAVE ANY QUESTIONS REGARDING THIS TRIAL, OR WOULD LIKE YOUR PET TO TAKE PART, PLEASE CONTACT THE CLINIC ON (03) 9807 9222
